PRINTING AND FINISHING RECCOMENDATIONS

INKS	To ensure good drying, use semi-fresh inks, preferably new and undiluted.
BLANKETS	For a good graphic impression, use compressible blankets suitable for offset printing machines in any conditions.
DRYING TIME	After printing, make small sheet pallets and allow 24 hours drying time.

SCREENS		For the offset printing process a screen value of 135-150 lpi is recommended. For dry offset printing this can be slightly higher, for example 200 lpi. For heavier graphic elements and higher densities, sufficient powder should be applied.
FINISHING		Prescoring is recommended for board weights and when folding against the grain direction.
VARNISHING		Preferably silkscreen UV.
PRINTABILITY AND RUNNABILITY		Every method of printing, embossing, punching, die cutting, creasing, laminating and UV varnishing is possible.
NOTE		Due to its hygroscopic nature, paper can show curl issues if not conditioned properly. To avoid any issue, we recommend to store the paper closed in its original wrap inside the printing area for at least 24-48 hours. After this conditioning time, the wrapping can be open and the paper can be utilized.
