

EKOenergy's Secretariat
confirms that

Favini S.r.l.

used **745 421 kWh** of
EKOenergy-labelled **hydropower**
in **Italy** in **2025**.

Steven Vanholme
Programme manager

EKOenergy is a globally available, nonprofit ecolabel for electricity, gas, and heat. Energy with the EKOenergy ecolabel is 100% renewable, fulfils additional sustainability criteria and raises funds for new renewable energy projects.

The LEED Standard accepts EKOenergy as an equivalent to Green-e.

Thank you for choosing EKOenergy!

The EKOenergy label guarantees that the renewable energy you use comes from installations that cause minimal possible damage to nature.

Your choice of EKOenergy also helps us **raise awareness of sustainability issues** and **promote renewable energy** worldwide. As an initiative of environmental NGOs, we set up renewable energy campaigns and advocate climate-friendly legislation.

Additionally, for each MWh of EKOenergy 0.10€ is allocated to **EKOenergy's Climate Fund** and used to fund carefully selected new renewable energy projects in low- and middle-income countries. All funded projects are managed by experienced organisations and address several **Sustainable Development Goals (SDGs)**.

One label, 17 goals

Our logo in your communication

As a user of EKOenergy-labelled energy, you have the right to use our internationally recognised and protected [EKOenergy logo](#) in your communications. Check out our brand book and feel free to get in touch.

More about EKOenergy

The EKOenergy ecolabel is **independent, nonprofit, and available worldwide**. It's managed by environmental NGOs as a concrete tool for climate action. For more information, please visit www.ekoenergy.org.
